## 1 General information

### 1.1 General information

### 1.1.1 Installation Instructions.

This manual provides installation instructions for the following ED50/ED100/ED250 door configurations. Reference Para. 2.2 and Para. 2.3 for illustrations.

## Single doors

1. RH and LH pull.
2. RH and LH push.
3. RH and LH pull as push.

## Double doors

1. Pull
2. Push
3. Pull as push.
4. Double egress.

## Companion doors

1. Push
2. Pull

## NOTICE

## ED50/ED100/ED250 Fine Cover and Header

 Setup and Troubleshooting.Reference ED50/ED100/ED250 Setup and Troubleshooting Manual DL4617-002.

### 1.1.2 dormakaba.us website.

Manuals are available for review, download, and printing on dormakaba.us website.

### 1.1.3 Dimensions

Unless otherwise specified, all dimensions are given in both inches (") and [mm].

### 1.1.4 Building codes and standards.

ED50/ED100/ED250 installation: observe applicable national and local building codes.

### 1.1.5 Symbols used in these instructions.

## ^ WARNING

This symbol warns of hazards which could result in personal injury or threat to health.

## CAUTION

This symbol warns of a potentially unsafe procedure or situation.

## NOTICE

Draws attention to important information presented in this document.

## 1 TIPS AND RECOMMENDATIONS

Clarifies instructions or other information presented in this document.

## 2 Product overview

### 2.1 Maximum door weights and door installation

Table 2.1.1 ED50 low energy door panel

### 2.1.1 Interior building surface installation.

## NOTICE

Installation on an interior building surface.
The ED50/ED100/ED250 with fine cover must be installed on an interior building surface.
2.1.2 ED50/ED100/ED250 (fine cover) exterior door installation.

## NOTICE

## Exterior door use.

To insure proper suitability for exterior door use, the following topics must be addressed in the context of the door application setting.

- For site-specific use factors such as high wind conditions and/or building pressure consult the factory.
- Door width, height, weight, and usage patterns.
- Observable prevailing conditions at the opening under which the operator is expected to perform. In some instances, this may require increased force settings to counteract these conditions.
- Door mounted presence sensors. When attempting to overcome these forces, it is strongly suggested that door mounted presence sensors be employed to enhance pedestrian safety through the opening.

## 3 Technical data

### 3.1 ED50/ED100/ED250 operator technical data

### 3.1.1 Operating conditions.

| Ambient temperature | 5 to $122^{\circ} \mathrm{F} \quad\left[-15\right.$ to $\left.50^{\circ} \mathrm{C}\right]$ |
| :--- | :--- |
| Suitable for dry <br> rooms only | Relative air humidity: <br> $93 \%$ maximum, non-condensing |
| Power supply | $115 \mathrm{Vac} \pm 10 \%, 50 / 60 \mathrm{~Hz}$ <br> 6.6 A maximum |
| Branch circuit <br> protection (provided <br> by others) | 15 A maximum, <br> dedicated branch circuit |
| Protection class | NEMA 1 [IP20] |
| Power wiring: <br> black, white, bare <br> copper (ground) | 12 AWG <br> maximum |
| Operating noise | Maximum 50 db(A) |

### 3.1.2 General specifications.

| Operator dimensions <br> $(W \times H \times D)$ | $27^{\prime \prime} \times 23 / 4 \times 51 / 8 "[685 \times 70 \times 130 \mathrm{~mm}]$ <br> $27^{\prime \prime}$ cover standard |
| :--- | :--- |
| Operator weight | $21.8 \mathrm{lb}[9.9 \mathrm{~kg}]$ |
| ED100/ED250: <br> Power supply for <br> accessories | $24 \mathrm{Vdc} \pm 5 \%, 1.5 \mathrm{~A}$ |
| ED50: power supply <br> for accessories | Separate power supply required |
| Maximum door <br> opening angle | 95 to $110^{\circ}$ depending on installation type |

### 3.1.5 Integrated functions

| Hold open time Automatic opening | dd parameter | 0 to 30 s <br> Optional 0-180 s. |
| :---: | :---: | :---: |
| Hold open time Night / bank | dn parameter | 0 to 30 s |
| Hold open time Manual opening | do parameter | 0 to 30 s |
| Door blocking behavior | hd parameter | Automatic, manual door modes |
| Electric strike delayed opening for locking mechanism | Ud parameter | 0 to 4 s |
| Locking <br> device X3 <br> feedback $\quad 43,3$ | Chapter 4 | Motor lock |
| Wind load control, maximum | Fo, Fc parameters | $\begin{aligned} & 33.7 \mathrm{lb} \mathrm{f} \\ & 150 \mathrm{~N} \end{aligned}$ |
| Voltage independent braking circuit | Reference: <br> Setup and Troubleshooting Instructions | Adjustable with potentiometer |

### 3.1.3 Inputs

| Wire size <br> Connector plug <br> screw size | 14 AWG <br> $1 / 16^{\prime \prime}$ |  |  |
| :--- | :--- | :--- | :--- |
| Activation <br> inputs | X4* | Interior, exterior | N. O. contact |
| Safety <br> sensors | X5 | Swing, approach sides. |  |
| Night-bank <br> (intercom <br> system) | X10 <br> 57, <br> $57 a$ | 8-24 Vdc/Vac $+5 \%$ |  |
| Night-bank <br> (key switch) | X1 <br> 35, 3 | d2 parameter | Configure for N.O. <br> or N.C. contact |
| Deactivation <br> of drive <br> function | X6 <br> 4, 4a | d1 parameter | Configure for N.O. <br> or N.C. contact |

### 3.1.4 Outputs

| Maximum wire size <br> Connector plug <br> screw size | 16 AWG <br> $1 / 16^{\prime \prime}$ |  |  |
| :--- | :--- | :--- | :--- |
|  | Sr parameter | Com, N.O., N.C. |  |
| Door | $\mathbf{X 7}$ | Door closed <br> Door open <br> Door closed, locked | contacts |

| LED status indicators <br> Green, Red, Yellow |  | 24 Vdc power <br> Error codes <br> Service interval |
| :--- | :--- | :--- |
| Mode and Exit Only <br> switches |  | Reference: <br> Setup and <br> Troubleshooting Close, Open <br> Instructions |
| User interface | 4 button keypad, Off, On <br> 2 digit display |  |
| Slot for upgrade <br> cards | Extension of <br> functional range. |  |
| Firmware update | Firmware update |  |

### 3.2 Operating specifications - ED100/ED250

| 3.2.1 ED100 |  |
| :---: | :---: |
| Maximum power input | 120 watt |
| Closing torque |  |
| Maximum door weight | FE: 250 lb [113kg], depending on specific door application. |
|  | LE: 600 lb [272kg], depending on specific door application. |
| Door width | 28" - 55" [700-1400mm] |
| Opening speed 0-90 | $4^{*}-12$ seconds |
| Closing speed $90-0^{\circ}$ | 5* - 21 seconds |
| Axle extensions | 20/30/60 mm |
| Reveal depth, pull arm | $\begin{aligned} & \pm 11 / 16^{\prime \prime} \\ & {[ \pm 30 \mathrm{~mm}(-60 \mathrm{~mm})]} \end{aligned}$ |
| Reveal depth, push arm | $\begin{aligned} & 0-1911 / 16 " \\ & {[0-500 \mathrm{~mm}]} \end{aligned}$ |

*Depending on door panel weight, automatically limited with low energy power operator doors (ANSI A156.19).
Maximum speeds will only be reached in full energy operating mode, low door panel weight, and a minimum learned opening angle of $95^{\circ}$.

### 3.3 Operating specifications - ED50

### 3.3.1 ED50

| Maximum power <br> consumption | 120 watts |  |
| :--- | :--- | :--- |
| Opening force <br> Ibf - N <br> Fo parameter | Minimum <br> $4.5[20]$ | Maximum <br> $13.5[60]$ |
| Manual closing force <br> lbf - N <br> Fc parameter | Minimum <br> $4.5[20]$ | Maximum <br> $13.5[60]$ |
| Maximum door <br> weight, lb [kg] | $220[100 \mathrm{~kg})$ | Depending on door <br> width and application. |
| Door width: ED50 | Minimum | Maximum <br> 4" " |

| Maximum opening <br> speed, $\%$ | 27 |
| :--- | :--- |

FE - Configured for full energy
LE - Low energy basic device, or configured for low energy
*If power assist support set to maximum, effective from an opening width of approximately $3^{\circ}$.
** The torque is available in the event of an automatic opening in automatic mode.
*** In the push version of the slide channel installation type, the forces reduce by approximately $33 \%$.

## 4 Terminal board interfaces

### 4.1 ED50/ED100/ED250 terminal board interfaces

Fig. 4.1.1 Terminal board electrical connections

1 Green LED
2 Yellow LED
3 Red LED
4 Key (red insert) location in socket. Assigned plug has tab in same location broken off.

5 Jumpers, factory installed at following terminals:

- 4 and $4 a$
- 15 and $3^{\star}$
- 11 and $3^{\star}$
*Removed if activation input used.
6 DCW upgrade card plug
7 Fire protection upgrade card plug.

## 1 TIPS AND RECOMMENDATIONS <br> - Use documentation provided with each device for electrical installation.

## TIPS AND RECOMMENDATIONS

- It is recommended not to connect system accessories to board until operator has been commissioned and learning cycle performed (Setup and Troubleshooting Instructions).

# 5 ED50/ED100/ED250 door signage 

### 5.1 ED100/ED250 full energy operator - ANSI/BHMA A156.10

### 5.1.1 Overview

Signage and warnings are specified in ANSI /BHMA A156.10, American National Standard for Power Operated Pedestrian Doors, paragraph 11.

### 5.1.2 Door, one way traffic, Fig. 5.1.1.

1. Arrow and AUTOMATIC DOOR, one side of decal.

- Shall be visible from approach side of a swinging door, mounted on door at a height of 50 " $\pm 12$ " from floor to centerline of sign.

2. DO NOT ENTER and AUTOMATIC DOOR, one side of decal (or separate decal for solid doors - DD0739-020).

- Shall be visible from non-approach side of door that swings towards pedestrians attempting to travel in wrong direction.

### 5.1.3 Door, two way traffic, Fig. 5.1.2.

1. Arrow and AUTOMATIC DOOR, one side of decal.

- Shall be visible from approach side of a swinging door, mounted on door at a height of 50 " $\pm 12$ " from floor to centerline of sign.

2. CAUTION AUTOMATIC DOOR, one side of decal.

- Swinging doors serving both egress and ingress shall have a "CAUTION AUTOMATIC DOOR" sign visible from swing side of door.
- Sign shall be mounted on door at a height of $50 \pm 12^{\prime \prime}$ from floor to centerline of sign.

### 5.2 ED50/ED100/ED250 low energy operator - ANSI/BHMA A156.19

### 5.2.1 Overview

Signage and warnings are specified in ANSI /BHMA A156.19, American National Standard for Power Assist and Low Energy Power Operated Doors.

### 5.2.2 All low energy doors.

1. AUTOMATIC CAUTION DOOR decal.

- All low energy doors shall be marked with signage visible from both side of door with the words "AUTOMATIC CAUTION DOOR".
- Signs shall be mounted 50 " $\pm 12$ " from floor to centerline of sign.
5.2.3 Knowing act switch used to initiate door operation.

1. ACTIVATE SWITCH TO OPERATE decal.

- When a knowing act device is used to initiate operation of door operator, door shall be provided with sign on each side of door where switch is operated with message "ACTIVATE SWITCH TO OPERATE".

### 5.2.4 Push/Pull used to initiate door operation.

1. PUSH TO OPERATE, PULL TO OPERATE decals.

- When push/pull is used to initiate operation of door operator, doors shall be provided with the message "PUSH TO OPERATE" on push side of door and "PULL TO OPERATE" on pull side of door.

Fig. 5.1.1 One decal, approach side, non-approach side

Fig. 5.1.2 One decal, two way traffic

Fig. 5.1.3 ACTIVATE SWITCH TO OPERATE decal

```
ACTIVATE SWITCH
TO OPERATE
```

DD0758-010

### 5.1.4 Knowing act door.

1. ACTIVATE SWITCH TO OPERATE decal.

- Knowing act doors shall have signage stating "ACTIVATE SWITCH TO OPERATE" on side of door having knowing act switch or other knowing act device.

### 5.3 Safety label, automatic swing doors

### 5.3.1 Automatic swinging door safety information label

This AAADM label outlines safety checks that should be performed daily on automatic swinging door controlled by an ED100 or ED250 operator configured for full energy mode.

### 5.3.2 Safety information label location

Place label in a protected, visible location on door frame, near program switch panel if possible.

### 5.3.3 Annual compliance section of label

This section of label is only completed on automatic swing doors that comply with ANSI/BHMA A156.10 standard and pass inspection by an AAADM certified dormakaba USA, Inc. technician.

### 5.3.4 Additional annual compliance inspection labels

Place additional labels over annual compliance inspection section of safety information label.

### 5.4 Safety label, low energy swing doors

### 5.4.1 Low energy swinging door safety information label

This AAADM label outlines safety checks that should be performed daily on low energy swinging door controlled by an ED50 operator or an ED100/ED250 operator configured for low energy mode.

### 5.4.2 Safety information label location

Place label in a protected, visible location on door frame, near program switch panel if possible.

### 5.4.3 Annual compliance section of label

This section of label is only completed on low energy swing doors that comply with ANSI/BHMA A156.19 standard and pass inspection by an AAADM certified dormakaba USA, Inc. technician.

### 5.4.4 Additional annual compliance inspection labels

 Place additional labels over annual compliance inspection section of safety information label.Fig. 5.3.2 Annual compliance inspection labels

ANNUAL COMPLIANCE INSPECTION

INSPECT FOR AND COMPLIES WITH ANSI A156.19 ON: DATE:
by AAADM Certified Inspector

Fig. 5.3.1 Safety information labels

SAFETY INFORMATION Automatic Swinging Doors

These minimum safety checks, in addition to those in the Owner's Manual, should be made each day and after any loss of electrical power.

1. Walk toward the door at a normal pace. The door should open when you are about 4 feet from the door.
2. Stand motionless on threshold for at least 10 seconds. The door should not close.
3. Move clear of the area. The door should remain open for at least 1.5 seconds and should close slowly and smoothly.
4. Repeat steps 1 through 3 from other direction if door is used for two way traffic.
5. Inspect the floor area. It should be clean with no loose parts that might cause user to trip or fall. Keep traffic path clear.
6. Inspect door's overall condition. The appropriate signage should be present.
7. Have door inspected by an AAADM certified inspector at least annually.
DO NOT USE DOOR if it fails any of these safety checks of if it malfunctions in any way. Call a qualified automatic door service company to have door repaired or serviced.

See Owner's manual or instructions for details on each of these and other safety items. If you need a copy of the manual, contact the manufacturer.

SAFETY INFORMATION
Low Energy Swinging Doors

These minimum safety checks, in addition to those in the Owner's Manual, should be made each day and after any loss of electrical power.

1. Activate the door. Door should open at a slow smooth pace (4 or more seconds), and stop without impact.
2. Door must remain fully open for a minimum of 5 seconds before beginning to close.
3. Door should close at a slow, smooth pace (4 or more seconds), and stop without impact.
4. Inspect the floor area. It should be clean with no loose parts that might cause user to trip or fall. Keep traffic path clear.
5. Inspect door's overall condition. The appropriate signage should be present and the hardware should be in good condition.
6. Have door inspected by an AAADM certified inspector at least annually.
DO NOT USE DOOR if it fails any of these safety checks of if it malfunctions in any way. Call a qualified automatic door service company to have door repaired or serviced.

See Owner's manual or instructions for details on each of these and other safety items. If you need a copy of the manual, contact the manufacturer.

## 8 ED50/ED100/ED250 operator installation

## NOTICE

## Double door Installation:

Repeat steps in Chapter 8 for each ED50/ED100/ED250 operator.

### 8.1 Installation preparation

## NOTICE

Installation steps listed in Chapter 8 through 11 are a recommendation. Structural, local conditions, available tools, or other factors or circumstances may require modification to these steps.

## 1. WARNING

ED50/ED100/ED250 system should be installed by trained and knowledgeable installers experienced in installation and commissioning of swing door operators. The installer should be familiar with all applicable local and national building code requirements, and with requirements of current ANSI/BHMA standards:

- A156.10, Power Operated Pedestrian Doors.
- A156.19, Power Assist and Low Energy Power Operated Doors.

### 8.1.1 Door frame and door.

## CAUTION

Insure area around door frame, adjacent walls and door is readily accessible and free of objects and debris.

### 8.1.2 Activation and knowing act devices.

1. Verify activation and knowing act devices planned
for or in place for the door.
1
TIPS AND RECOMMENDATIONS
Device wiring should be planned for prior to operator installation.

## NOTICE

## Companion Door Installation:

Reference Chapters 16 through 19.

### 8.1.3 ED50/ED100/ED250 mounting plate installation preparation.

## CAUTION

Using applicable ED50/ED100/ED250 installation template (Chapter 7), holes for mounting plate fasteners must be located and drilled into door frame, wall or substructure prior to mounting plate installation.

## CAUTION

Mounting plate installation must be orientated with 115 Vac connection towards door hinge side.

### 8.1.4 ED50/ED100/ED250 mounting plate extension

 used with optional full door width cover.
## i

## TIPS AND RECOMMENDATIONS

Mounting plate extension is included for full width cover installation.

- Reference Appendix A for mounting plate extension and full width cover installation.

### 8.1.5 ED50/ED100/ED250 115 Vac electrical installation.

## d WARNING

Work on electrical equipment and 115 Vac wiring installation must be performed only by qualified personnel!

## WARNING

115 Vac wiring to ED50/ED100/ED250 operator must conform to local and national electrical codes.

### 8.2 Remove mounting plate from ED50/ED100/ED250 operator

Fig. 8.2.1 115 Vac plug removal

5115 Vac plug
6115 Vac socket

### 8.2.1 Remove 115 Vac plug from receptacle.

1. Remove 115 Vac plug (5) from its receptacle (6).

### 8.2.2 Remove mounting plate from operator.

1. Loosen all eight captive M6 socket head cap screws (SHCS) using a 5 mm hex T-handle.

## $\stackrel{\circ}{1}$

## TIPS AND RECOMMENDATIONS

Insure all eight fasteners are free of the mounting plate.
2. Remove operator from mounting plate.

1 TIPS AND RECOMMENDATIONS
Guide pin resistance may require screwdriver to start operator removal from end of mounting plate (Fig. 8.2.4).

4 Conduit box HX3501-001
5120 Vac label DD3597-001
Instruction manual, power cord kit DL3597-001

### 8.3.1 Customer 115 Vac wiring.

## A WARNING

Routing and connection of 115 Vac wiring to ED50/ED100/ED250 must be performed by a qualified person!

## ( WARNING

115 Vac branch circuit disconnect or circuit breaker must be OFF!

## CAUTION

Use copper conductors only!

### 8.3.2 ED50/ED100/ED250 wiring options.

1. Conduit box CB (Fig. 8.3.3).

- U/L approved conduit box accessory; provides 115 Vac surface wiring to ED50/ED100/ED250.
- Reference Para. 8.3.3 for CB box installation.

2. Power cord wiring kit PC (Fig. 8.3.4).

- Eliminates need for hard wiring. Permits ED50/ED100/ED250 to plug directly into 115 Vac receptacle.
- Power cord length: $15^{\prime \prime}$ from end of conduit box to center of plug.

## CAUTION

Insure PC installation conforms to local and national electrical codes.

Fig. 8.3.5 115 Vac terminal block mounting
1115 VAC terminal block

5 M3.5 screw
6115 Vac plug to operator
L 115 Vac
N Neutral
G Ground

Fig. 8.3.6 Conduit box installed on mounting plate

8.3.3 Install conduit box (option).

## TIPS AND RECOMMENDATIONS

115 Vac terminal block is secured to mounting plate by M3 $\times 25$ Phillips head screw.

- Screw must be loosened to allow conduit box tabs to slide into mounting plate slots.
- Screw is then threaded into conduit box mounting hole and tightened.

1. Loosen M3 $\times 25$ Phillips head screw.
2. Slide conduit box tabs into slots in bottom of mounting plate until hole in conduit box lines up with hole in mounting plate.
3. Thread M3 Phillips head screw into conduit box mounting hole and tighten screw.

## CAUTION

## Terminal block M3 screw torque.

Tighten M3 screw to a torque of 5-7in-lb.

- Insure screw is threaded into conduit box mounting hole.

4. Mounting plate assembly is ready for installation.

Fig. 8.3.7 PC power cord wiring kit assembly (option)

## Power cord

3 Cord grip
4 Conduit box
$5 \quad 120$ Vac label

### 8.4 Mounting plate attachment to jamb or wall

Fig. 8.4.1 Mounting plate installation

## NOTICE

Optional full width cover installation.
Reference Appendix A for mounting plate extension installation.

### 8.4.1 Fasten mounting plate to jamb and/or wall.

## CAUTION

Conduit box (if used):

- Insure conduit box or plate is prepared with applicable conduit fitting or cord grip.
- Insure jamb or wall is prepared for wiring to conduit fitting or cord grip.

1. Select applicable installation template.

## NOTICE

## Installation templates.

- Reference Chapter 7 - Installation Templates.

2. Using template as a guide, locate mounting plate on door frame/wall and prepare twelve mounting holes for mounting plate fasteners.

## CAUTION

- Select fasteners based on door frame and wall material.
- Use fasteners provided with ED50/ED100/ ED250 (Fig. 8.4.3).
- Use appropriate wall anchors if required.

3. Fasten mounting plate to door frame and/or wall.

### 8.4.2 Mounting plate installation checks.

## NOTICE

## Installation checks.

- Check level.
- Check spindle to hinge centerline distance.
- Check alignment.

Fig. 8.4.4 Guide pin
13 Guide pin

### 8.4.3 Install third guide pin.

1. Install third guide pin (Fig. 8.4.1, 8.4.4) in mounting plate.

- Use 3 mm hex T-handle or hex key.

### 8.5 Connect customer 115 Vac to mounting plate terminal block

Fig. 8.5.1 115 Vac wiring example

Fig. 8.5.2 Conduit box installation

Fig. 8.5.3 PC power cord, conduit box installation

### 8.5.1 Connect customer 115 Vac wiring.

## 企 WARNING

Work on electrical equipment and ED50/ED100/ED250 115 Vac wiring installation must be only be performed by qualified personnel!
( WARNING
Insure disconnect supplying power to ED50/ED100/ED250 operator is OFF before connecting power!

1. Route wiring to 115 Vac terminal block.

## CAUTION

115 Vac wiring.
Use copper conductors only!
2. Connect 115 Vac wiring to terminal block.

- Terminal block screw tightening torque.

## CAUTION

TIGHTEN MAINS TERMINAL TO 5-7 in-Ib Use Copper Conductors ONLY
3. Connect earth ground to ground post.

### 8.6.1 Route accessory wiring to mounting plate.

1. Route wiring to 115 Vac terminal block side of mounting plate (Fig. 8.5.1).
2. Accessory wiring opposite door hinge side: route wiring into mounting plate track (Fig. 8.6.1) to 115 Vac terminal block side of mounting plate.
i TIPS AND RECOMMENDATIONS
Accessory wiring will terminate at ED100/ED250 terminal board (Chapter 4).

### 8.7 Remove protective film strips from operator

### 8.7.1 Remove protective film strips.

1. Remove two protective film strips from operator heat conductive pads.

## CAUTION

Heat conductive pads must remain clean once protective film strips are removed!

Fig. 8.7.1. ED50 operator heat conductive pads

1 Heat conductive pad

Heat conductive pad

Protective film strip

Fig. 8.7.2 ED100/ED250 operator heat conductive pads

Fig. 8.7.3 Protective film strip

### 8.8 Install ED100/ED250 operator onto mounting plate

Fig. 8.8.1 ED100/ED250 operator installation

3 Guide pin
$4 \quad 115$ Vac plug
6115 Vac socket
7 Power off/on switch
Fig. 8.8.2 115Vac plug and socket

Fig. 8.8.3 Terminal connectors
11 Connectors
12 Jumpers

### 8.8.1 Install operator onto mounting plate.

## CAUTION

Protective film strip removal.
Insure two protective film strips have been removed from operator heat conductive pads.

1. Slide ED100/ED250 operator over the three mounting plate guide pins and onto mounting plate.

- Guide 115 Vac plug (4) into housing adjacent to socket (6).

2. Thread the eight captive M6 SHCS into their mounting plate holes using 5 mm hex T-handle.
3. Tighten the eight M6 SHCS.

### 8.8.2 Insert 115 Vac plug into socket.

1. Insert 115 Vac plug from mounting plate 115 Vac terminal block into socket (Fig. 8.8.2).

### 8.8.3 Full width cover option.

## CAUTION

Reference Appendix A for full width cover options.

### 8.8.4 Connect accessory wiring.

1. Use applicable terminal connectors (Fig. 8.8.3) to terminate accessory wiring.
2. Use diagram in Chapter 4 to locate connector to its socket.

## CAUTION

Safety sensor jumpers.
Jumpers (Fig. 8.8.3) must be in place on safety sensor connectors.

- Reference Chapter 4.

### 8.9 Install ED50 operator onto mounting plate

Fig. 8.9.1 ED50 operator mounting plate installation

Fig. 8.9.2 115Vac plug and socket
4115 Vac plug
6115 Vac socket
7 Power off/on switch

### 8.9.1 Install operator onto mounting plate.

## CAUTION

Protective film strip removal.
Insure two protective film strips have been removed from operator heat conductive pads..

1. Slide ED50 operator over the three mounting plate guide pins and onto mounting plate.

- Guide 115 Vac plug (4) into housing adjacent to socket (6).

2. Thread the eight captive M6 SHCS (7) into their mounting plate holes using 5 mm hex T-handle.
3. Tighten the eight M6 SHCS.

### 8.9.2 Insert 115 Vac plug into socket.

1. Insert 115 Vac plug from mounting plate 115 Vac terminal block into socket (Fig. 8.9.2).

### 8.9.3 Full width cover option.

## CAUTION

Reference Appendix A for full width cover options..

## 9 Push arm installation

### 9.1 Push arm installation templates

## NOTICE

Reference Chapter 7 - ED50/ED100/ED250 installation templates.

Fig. 9.2.6 Arm assemblies attached to door and ED100/ED250

### 9.2.2 Attach drive arm to operator.

## CAUTION

Door must be fully closed!

## - WARNING

Use caution when working in proximity of door and push arm!.

## CAUTION

## ED operator axle zero position.

In order to mount the drive arm in the correct position, the operator axle must be at the closed position.

1. Set ED50/ED100/ED250 operator spring tension based on door width. Reference Chapter 11.

## TIPS AND RECOMMENDATIONS

Reference Para. Chapter 11, Set operator spring tension.
2. Insert axle extension into drive arm.

- Reference Chapter 7 for installation templates.

3. Move arm to ED50/ED100/ED250, inserting arm into spindle at a $90^{\circ}$ angle to operator (Fig. 9.2.5).
4. Insert M8 SHCS through drive arm and axle extension. Thread SHCS into ED50/ ED100/ED250 spindle and tighten.

## CAUTION

Use torque wrench with hex key socket to tighten SHCS to $26 \mathrm{ft}-\mathrm{lb}$ [35.3 Nm]

### 9.2.3 Drill two holes in door for adjustment

 arm shoe.Installation templates (Chapter 7)
document location of shoe on door.

1. Drill two holes in door for adjustment arm shoe.

- Fastener type based on door material.

TIPS AND RECOMMENDATIONS
Reference Chapter 2 for arm fasteners.

### 9.2.4 Secure adjustment arm assembly to door.

1. Fasten adjustment arm assembly to door (Fig. 9.2.6).

Fig.9.2.7 Shoe fastener covers
11 Shoe screw cover

Fig. 9.2.10 Adjustment arm at $90^{\circ}$ angle to door

### 9.2.5 Install shoe fastener covers.

1. Install two shoe fastener covers.

### 9.2.6 Connect adjustment arm to drive arm.

1. Loosen the two adjustment $\mathrm{M} 6 \times 10 \mathrm{~mm}$ flanged button head screws.

Fig. 9.2.10 Adjustment arm M6 $\times 10$ screws

7 M6 x 10 mm flanged button head screw
2. Using square, position adjustment arm assembly at $90^{\circ}$ angle to door (Fig. 9.2.10).
3. Rotate drive arm and adjust length of adjustment arm until drive arm ball head (8) is aligned with adjustment arm socket (2).

## CAUTION

Maintain adjustment arm assembly at a $90^{\circ}$ angle to door (Fig. 9.2.10).
4. Insert adjustment arm ball head (8) into drive arm socket (2).

- Spring in socket will retain ball head in socket.

5. Secure adjustment arm position by tightening the two M6×10 mm flanged button head screws.

## CAUTION

Recheck that adjustment arm is at $90^{\circ}$ angle to door.

## 10 Pull arm installation

### 10.1 Pull arm installation

## NOTICE

Reference Chapter 7 - ED50/ED100/ED250 installation templates.

### 10.2 Pull arm assemblies

Fig. 10.2.1 Pull arm DK4709-11X

### 10.5 Assemble slide shoe

Fig. 10.5.1 Slide shoe and pivot pin
8 Slide shoe
9 1/2" pivot pin
10 1" Pivot pin
11 Retaining ring

### 10.4.1 Assemble track.

## CAUTION

Assemble track hardware based on RH or LH installation.

1. Remove both end caps (2) and one fixing piece (3) from track.
2. Slide bumper stop (16), bumper (12) and slide shoe assembly (9) into track.

- Do not tighten bumper stop M5 screw (17).

2. Secure fixing piece to end of track with M5 $\times 15$ screw (3.1).

- Use No. 2 Phillips, do not over-tighten.

### 10.5.1 Assemble slide shoe.

1. Insert pivot pin into slide shoe.
2. Install spring clip into pivot pin slot.

### 10.6 Assemble deep pull arm (DK4709-12X arm assembly), if used

Fig. 10.6.1 $\begin{aligned} & \text { Slotted } \\ & \text { spring }\end{aligned}$ spring pin

Fig. 10.6.3 CPD lever and slotted spring pins

10.6.1 Assemble drive arm and CPD lever assembly.

## CAUTION

Assemble arm and CPD lever based on RH or LH pull or push.

1. Secure CPD lever to arm with $M 6 \times 10$ SHCS.

### 10.7.1 Mount drive arm to operator.

## $\triangle$

## a WARNING

Use caution when working in proximity of door and pull arm!.

## CAUTION

ED50/ED100/ED250 operator axle zero position.
In order to mount the drive arm in the correct position, the spindle must be at the zero position.

1. Set ED50/ED100/ED250 operator spring tension based on door width. Reference Chapter 11.
2. Position drive arm with axle extension against spindle and parallel to door.
3. Rotate drive arm until edge of CPD lever is adjacent to surface of door. (Fig. 10.7.2).
4. Install drive arm with axle extension onto spindle, aligning axle extension to nearest spindle tooth.

- Depending on door reveal, this arm position may be more than one spindle tooth from the arm parallel to door position (step 2).

5. Push the axle extension onto spindle.
6. Thread the $\mathrm{M} 8 \times$ $\qquad$ mm SHCS (length determined by axle extension) into spindle and tighten SHCS.

## CAUTION

Use torque wrench with hex key socket to tighten M8 screw to $26 \mathrm{ft}-\mathrm{lb}$ [35.3 Nm].

Fig. 10.7.4 Track mounting holes in door

| $\mathbf{4}$ | Bumper stop | $\mathbf{6}$ | Fixing piece |

Fig. 10.7.7 Track assembly secured to door

Fig. 10.7.8 End caps and spindle cap installed

### 10.72 Locate and drill track mounting holes.

1. Using applicable template, locate and drill mounting holes for track.

### 10.7.3 Install slide shoe assembly onto CPD lever M8 mounting hole.

1. Thread pivot pin M8 SHCS into standard arm or CPD lever mounting hole (Fig. 10.7.5).
2. Use 6 mm hex key to tighten.

### 10.7.4 Track assembly.

1. Insure track components and deep pull arm are assembled based on hand of door (Para. 10.4).

### 10.7.5 Install track assembly onto slide shoe.

1. With fixing piece removed from track on opposite end from bumper, slide track assembly onto shoe (Fig. 10.7.6).
2. Install second fixing piece onto track.

### 10.7.6 Secure track assembly to door.

1. Attach track fixing pieces to door using selected fasteners.

- Insure track is level as fasteners are tightened.

### 10.7.7 Install end caps and spindle caps.

1. Install two end caps on track and the spindle cap.

### 10.8 Standard pull arm installation

Fig. 10.8.1 Drive arm parallel to door

Fig. 10.8.2 Drive arm installed on spindle

### 10.8.1 Mount drive arm to operator.

Use caution when working in proximity of door and pull arm!.

In order to mount the drive arm in the correct position, the spindle must be at the closed position.

1. Set ED50/ED100/ED250 operator spring tension based on door width. Reference Chapter 11.
2. Position drive arm with axle extension against spindle and parallel to door.
3. Rotate drive arm one spindle tooth in direction of door.

- Depending on door reveal, this arm position may be more than one spindle tooth from the arm parallel to door position (step 2).

4. Install drive arm with axle extension onto spindle.
5. Thread the $M 8 \times$ $\qquad$ mm SHCS (length determined by axle extension) into spindle and tighten SHCS.

## CAUTION

Use torque wrench with hex key socket to tighten M8 screw to $26 \mathrm{ft}-\mathrm{lb}$ [35.3 Nm].

Fig. 10.8.8 End caps and spindle cap installed

1 End cap
2 Spindle cap

### 10.8.2 Locate and drill track mounting holes.

1. Using applicable template, locate and drill mounting holes for track.
10.8.3 Install slide shoe assembly onto drive arm.
2. Thread pivot pin M8 SHCS into drive arm mounting hole (Fig. 10.8.5).

- Use 6 mm hex key to tighten.

### 10.8.4 Track assembly.

1. Insure track components are assembled based on hand of door (Para. 10.4).

### 10.8.5 Install track assembly onto slide shoe.

1. With fixing piece removed from track on opposite end from bumper, slide track assembly onto shoe (Fig. 10.8.6).
2. Install second fixing piece onto track.

### 10.8.6 Secure track assembly to door.

1. Attach track fixing pieces to door using selected fasteners.

- Insure track is level as fasteners are tightened.
10.8.7 Install end caps and spindle caps.

1. Install two end caps on track and the spindle cap.

## 11 Operator spring tension

### 11.1 Set ED50/ED100/ED250 operator spring tension

Fig. 11.1.1 Spring tension adjustment

1 Spring tension adjustment

Fig. 11.1.2 5 mm T-handle hexkey

Fig. 11.1.3 Door pressure gauge

11.1.1 Spring tension setting revolutions.

| Door <br> width |  |  |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Inches | 28 | 32 | 36 | 42 | 48 | 55 | 63 |
| mm | 711 | 813 | 914 | 1067 | 1219 | 1400 | 1600 |
| Spring <br> setting <br> revolutions | 10 | 10 | 14 | 16 | 18 | --- | --- |
| ED50/ <br> ED100 | 10 | 14 | 16 | 18 | 24 | 24 |  |
| ED250 | 10 |  |  |  |  |  |  |

### 11.1.2 Operator spring tension function.

1. Spring tension sets closing force on door.
2. Required spring tension is based on door width.

### 11.1.3 Spring tension adjustment.

1. Spring tension adjustment is factory set fully CCW, no spring tension.
2. Spring must be pretensioned per Para. 11.1.1.

- Use 5 mm T-handle hex key. Clockwise - increases spring tension.
Counterclockwise - decreases spring tension.

## CAUTION

A minimum of ten spring tension revolutions are required to operate system.

### 11.1.4 Check door closing force.

1. Para. 11.1.1 lists approximate spring tension settings.
2. Use pressure gauge to check door closing force at $2^{\circ}$ and adjust tension setting if necessary.
1 TIPS AND RECOMMENDATIONS
Reference Chapter 12, ANSI/BHMA standards for door closing forces.

## TIPS AND RECOMMENDATIONS

System checks spring tension during learning cycle (Reference ED100/ED250 Setup Manual). Learning cycle will be canceled if spring is insufficiently tensioned; door will stop and display will show a rotating "O" and an "F".
(1) E

## 12 ANSI/BHMA standards

### 12.1 ANSI/BHMA A156.10 Power operated pedestrian doors

The following table references portions of content from ANSI/BHMA A156.10. Refer to the standard, available through ANSI or BHMA for additional information. Standard material reprinted with BHMA permission.

Reference Appendix A for additional parameter detail.

### 12.1.1 Door measurements, power operated swing door.

| ED100/ED250 Parameter |  |  | A156.10 standard |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Parameter |  | Function | Factory setting | Adjustment range | Para. | Requirement |
| So | Opening speed automatic mode | Swing door opening speed, automatic mode. | 25\% | $\begin{aligned} & \text { ED100 8\% } \mathrm{s}-50 \% / \mathrm{s} \\ & \text { ED250 8\% }-60 \% / 5 \end{aligned}$ | 10.2.1 | Swing door opening time to $80^{\circ}$, not less than 1.5 s . |
| Sc | Closing speed automatic mode | Swing door closing speed, automatic mode. | 25\% | $\begin{aligned} & \text { ED100 8\% } \mathrm{s}-50 \% / \mathrm{s} \\ & \text { ED250 8\% }-60 \% / 5 \end{aligned}$ | 10.2.5 | Swing door closing time to latch check. Reference 28.1.2. |
| Fo | Static force in opening direction | Static force on door closing edge in opening direction. | $\begin{aligned} & 13.5 \mathrm{lbf} \\ & {[60 \mathrm{~N}]} \end{aligned}$ | 4.5 lbf - <br> 33.7 lbf <br> Reduced in low energy mode. | 10.2.2 | Not to exceed 30 lbf measured 1" from lock edge of door. |
| Fc | Static force in closing direction | Static force on door closing edge in closing direction. | $\begin{aligned} & 13.5 \mathrm{lbf} \\ & {[60 \mathrm{~N}]} \end{aligned}$ | $4.5 \mathrm{lbf}-33.7 \mathrm{lbf}$ Reduced in low energy mode | 10.2.7 | Not to exceed 30 lbf measured 1" from lock edge of door at any point in closing cycle. |
| bc | Back check | Checking or slowing down of door speed before door being fully opened. | $10^{\circ}$ | $5^{\circ}-40^{\circ}$ | 10.2.3 | Shall occur at no less than $10^{\circ}$ of full open position. |
| dd | Hold open time | Open time for swing doors using sensors or control mats upon loss of detection. | 5s | $0 s-30 s$ $0 s-180 s$ <br> (F2 parameter set to full energy) | 10.2.4 | Minimum of 1.5 seconds after loss of detection. |
|  | Latch check | Checking or slowing down of door speed before door being fully closed. |  | Not adjustable | 10.2.6 | Not less than $10^{\circ}$ from closed position. The door will not close through the final $10^{\circ}$ in less than 1.5 s . |
| hS | Reference | Support for manual mode in door closed position. |  |  |  |  |
| hA | service manual for parameter | Adjustment, door activation angle. |  |  | 10.2.8 | Not greater than 30 lb fapplied 1" from edge of lock stile to open. |
| hF |  | Power assist function. |  |  |  |  |

### 12.1.2 A156.10, 10.2.5 swing door closing time to latch check

| "D" door width, <br> minimum <br> (inches) | "W" door weight, <br> maximum <br> (pounds) | "T" closing time, <br> minimum, to latch <br> check (seconds) |
| :--- | :--- | :--- |
| 36 or less | 100 | 2.0 |
| 36 | 140 | 2.3 |

### 12.2 ANSI/BHMA A156.19 Low energy power operated doors

The following table references portions of content from ANSI/BHMA A156.19. Refer to the standard, available through ANSI or BHMA for additional information. Standard material reprinted with BHMA permission.

### 12.2.1 Door measurements, low energy power operated door.

| ED50/ED100/ED250 Parameter |  |  | A156.19 standard |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Parameter |  | Function | Factory setting | Adjustment range | Para. | Requirement |
| So | Opening speed | Swing door opening speed. | 17\% <br> Note1 | $8 \%-27 \%$ <br> 27\% s max. <br> L.E. mode | 4.2 | Opening <br> Doors shall open from closed to back check or $80^{\circ}$, whichever occurs first, in 3 seconds or longer as required in Table I. <br> Total opening time to $90^{\circ}$ shall be as in Table II. If door opens at more than $90^{\circ}$, iit shall continue at the same rate as back check speed. |
| bc | Back check | Checking or slowing down of door speed before door being fully opened. | $10^{\circ}$ | $5^{\circ}-40^{\circ}$ | 4.2 | Back check shall not occur before $60^{\circ}$ opening. |
| Sc | Closing speed | Swing door closing speed, automatic mode. | 17\% <br> Note 1 | $8 \%-27 \%$ <br> 27\% s max. <br> L.E. mode | 4.4 | Closing: <br> Doors shall close from $90^{\circ}$ to $10^{\circ}$ in 3 seconds or longer as required in Table I. <br> Doors shall close from $10^{\circ}$ to fully closed in not less than 1.5 seconds. |
| dd | Hold open time | Hold open time. | 5 s | 5s-30s | 4.3 | Time delay: <br> When powered open, the door shall remain open at the fully opened position for not less than 5 seconds. <br> Exception: when push-pull activation is used, the door shall remain at the fully opened position for not less than 3 seconds. |
| hS | Reference Chapter 14 for parameter detail. | Support for manual mode in door closed position. |  |  | 4.5 | Doors shall open with a manual force: <br> - Not to exceed 15 lbf [67 N]to release a latch if equipped with a latch. <br> - To set a door in motion 30 lbf [133 $\mathrm{N}]$. <br> - To fully open the door $15 \mathrm{lbf}[67 \mathrm{~N}]$. Forces shall be measured 1" [25.5] from latch edge of door. |
| hA |  | Adjustment, door activation angle. |  |  |  |  |
| hF |  | Power assist function. |  |  |  |  |
| Fo | Static force in opening direction | Static force on door closing edge in opening direction. | $\begin{aligned} & 13.5 \mathrm{lbf} \\ & {[60 \mathrm{~N}]} \end{aligned}$ | $\begin{aligned} & 4.5 \mathrm{lbf}[20 \mathrm{~N}]- \\ & 15 \mathrm{lbf}[67 \mathrm{~N}] \end{aligned}$ | 4.5 | Force required to prevent a stopped door from opening or closing shall not exceed 15 lb f [67 N] measured 1" [25.4] from latch edge of door at any point during opening or closing. |
| Fc | Static force in closing direction | Static force on door closing edge in closing direction. | $\begin{aligned} & 13.5 \mathrm{lbf} \\ & {[60 \mathrm{~N}]} \end{aligned}$ | $\begin{aligned} & 4.5 \mathrm{lbf}[20 \mathrm{~N}]- \\ & 15 \mathrm{lbf}[67 \mathrm{~N}] \end{aligned}$ | 4.5 |  |

Note 1: Speed may be slower after learning cycle completed.

### 12.2.2 A156.19, Table I: Minimum opening and closing times.

| "D" door width, <br> inches [mm] | "W" doorweight, pounds [kg] |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :---: | :---: | :---: | :---: |
|  | $100[45.4]$ | $125[56.7]$ | $150[68]$ | $175[79.4]$ | $200[90.7]$ |  |  |  |  |
| $30[762]$ | 3.0 | 3.0 | 3.0 | 3.0 | 3.5 |  |  |  |  |
| $36[914]$ | 3.0 s | 3.5 s | 3.5 s | 3.0 s | 3.0 s |  |  |  |  |

Minimum opening time to back check or 80 degrees (whichever occurs first).
Minimum closing time from 90 degrees to latch check or 10 degrees (whichever occurs first).
12.2.3 A156.19, Table II: Total opening time to 90 degrees.

| Back check at $60^{\circ}$ | Back check at $70^{\circ}$ | Back check at $80^{\circ}$ |
| :--- | :--- | :--- |
| Table I plus 2 s | Table I plus 1.5 s | Table I plus 1 s |
| If door opens more than $90^{\circ}$, it shall continue at the same rate as backcheck speed. |  |  |
| Back check occurring at a point between positions shall use lowest setting. |  |  |

### 12.2.4 Other door weights and widths.

Closing time $T=(D \sqrt{W}) / 188$
$D=$ Width of door in inches.
W = Weight of door in pounds.
$\mathrm{T}=$ Closing time to latch check in seconds.

SI (metric) units
Closing time $T=(D \sqrt{W}) / 2260$
$D=$ Width of door in mm .
$W=$ Weight of door in kg
$\mathrm{T}=$ Closing time to latch check in seconds.

## 13 Install door signage

### 13.1 Install door signage

13.1.1 Install door signage.

Install applicable door signage as outlined in Chapter 5, ED50/ED100/ED250 door signage.

## 14 Fine cover, end caps and spindle caps

### 14.1 Fine cover end cap and spindle installation

### 14.1.1 Cover and end cap installation.

Fine cover and end caps will be installed after ED50/ED100/ED250 operator setup is completed.

- Reference ED100/ED250 Setup and Troubleshooting Manual DL4617-002.

## 15 Maintenance

### 15.1 Safety label, automatic swing doors

### 15.1.1 Automatic swinging door safety information label

This AAADM label outlines safety checks that should be performed daily on automatic swinging door controlled by an ED100 or ED250 operator configured for full energy mode.

### 15.1.2 Safety information label location

Place label in a protected, visible location on door frame, near program switch panel if possible.

### 15.1.3 Annual compliance section of label

This section of label is only completed on automatic swing doors that comply with ANSI/BHMA A156.10 standard and pass inspection by an AAADM certified dormakaba USA, Inc. technician.
15.1.4 Additional annual compliance inspection labels Place additional labels over annual compliance inspection section of safety information label.

### 15.2 Safety label, low energy swing doors

### 15.2.1 Low energy swinging door safety information label

This AAADM label outlines safety checks that should be performed daily on low energy swinging door controlled by an ED50 operator or ED100/ED250 operator configured for the low energy mode.

### 15.2.2 Safety information label location

Place label in a protected, visible location on door frame, near program switch panel if possible.

### 15.2.3 Annual compliance section of label

This section of label is only completed on low energy swing doors that comply with ANSI/BHMA A156.19 standard and pass inspection by an AAADM certified dormakaba USA, Inc. technician.

### 15.2.4 Additional annual compliance inspection labels

Place additional labels over annual compliance inspection section of safety information label.

## SAFETY INFORMATION Automatic Swinging Doors

These minimum safety checks, in addition to those in the Owner's Manual, should be made each day and after any loss of electrical power.

1. Walk toward the door at a normal pace. The door should open when you are about 4 feet from the door.
2. Stand motionless on threshold for at least 10 seconds. The door should not close.
3. Move clear of the area. The door should remain open for at least 1.5 seconds and should close slowly and smoothly.
4. Repeat steps 1 through 3 from other direction if door is used for two way traffic.
5. Inspect the floor area. It should be clean with no loose parts that might cause user to trip or fall. Keep traffic path clear.
6. Inspect door's overall condition. The appropriate signage should be present.
7. Have door inspected by an AAADM certified inspector at least annually.
DO NOT USE DOOR if it fails any of these safety checks of if it malfunctions in any way. Call a qualified automatic door service company to have door repaired or serviced.

See Owner's manual or instructions for details on each of these and other safety items. If you need a copy of the manual, contact the manufacturer.

## SAFETY INFORMATION Low Energy Swinging Doors

These minimum safety checks, in addition to those in the Owner's Manual, should be made each day and after any loss of electrical power.

1. Activate the door. Door should open at a slow smooth pace (4 or more seconds), and stop without impact.
2. Door must remain fully open for a minimum of 5 seconds before beginning to close.
3. Door should close at a slow, smooth pace (4 or more seconds), and stop without impact.
4. Inspect the floor area. It should be clean with no loose parts that might cause user to trip or fall. Keep traffic path clear.
5. Inspect door's overall condition. The appropriate signage should be present and the hardware should be in good condition.
6. Have door inspected by an AAADM certified inspector at least annually.

DO NOT USE DOOR if it fails any of these safety checks of if it malfunctions in any way. Call a qualified automatic door service company to have door repaired or serviced.

See Owner's manual or instructions for details on each of these and other safety items. If you need a copy of the manual, contact the manufacturer.

### 15.2 Arm fasteners - torque requirements

Fig. 15.2.1 Arm M8 SHCS cap
8 Cap

Fig. 15.2.2 M8 SHCS

Fig. 15.2.3 Pivot pin M8 socket head

### 15.2.1 Check drive arm M8 SHCS torque.

1. Set Mode switch to CLOSE.
2. Remove cap over M8 SHCS.
3. Check torque.
4. Replace cap.

## CAUTION

Using torque wrench with 6 mm hex key socket, check M8 SHCS torque: $26 \mathrm{ft}-\mathrm{lb}$ [35.3 Nm].

### 15.2.2 Check pivot pin M8 socket head torque.

1. Check torque.

## CAUTION

Use torque wrench with hex key socket. M8 screw torque: $5.9-7.4 \mathrm{ft}-\mathrm{lb}[8-10 \mathrm{Nm}]$.

## 16 Companion door installation

| 5 | +13 CW | $54^{\prime \prime}$ | $36^{\prime \prime}$ |
| 6 |  |  | $42^{\prime \prime}$ |

### 16.3 Select installation template

### 16.3.1 Select installation template.

1. Select installation template based on companion door configuration.

- Reference Para. 16.1.

Fig. 16.3.1 ED100/ED250 Companion push example

Fig. 16.3.2 ED100/ED250 Companion pull example

### 16.4 Assemble ED100/ED250 and closer backplates

1 ED100, mtg extr connector DC3491-010
$2 \mathrm{M} 6 \times 10 \mathrm{~mm}$ socket head w/washer DF3495-01Z
$3 \mathrm{M} 6 \times 10 \mathrm{~mm}$
Phillips flat head
screw DF3496-01Z

Fig. 16.4.1 Backplate connect kit DK3491-001

Fig. 16.4.2 Backplate assembly example

### 16.4.1 Remove ED100 or ED250 operator from mounting plate.

1. Reference Chapter 8, Para. 8.2.
2. Remove operator from its mounting plate.

### 16.4.2 Connect ED100/ED250 mounting plate and closer mounting plate.

1. Connect ED100/ED250 operator mounting plate to companion mounting plate using backplate connect kit DK3491-001.
2. Insure the two mounting plates are configured based on door configuration.

## 17 Companion door, push arm installation

### 17.1 Mount backplate, push arm application

Fig. 17.1.1 ED100/ED250 Companion backplate template; LH push version

Fig. 17.1.2 Push arm backplate mounting

### 17.1.1 Install backplate, push arm application.

1. Using backplate template (Fig. 17.1.1 and 17.1.2), locate left hand and right hand backplate mounting holes on door frame/wall.

## NOTICE

Template documents a LH push installation. Template must be mirrored for a RH push installation.
2. Place backplate on door frame/wall and align with the mounting hole locations in step 1.

- Check hinge pin centerline to edge of backplate distance.

3. Check backplate for level; adjust if necessary.
4. Mark backplate mounting hole locations.
5. Remove backplate and drill holes based on fastener selected for door frame/wall material.

- Reference Para. 2.1 for backplate mounting screw kit.
- Use appropriate wall anchors if required.

6. Place backplate on door frame/wall and secure with fasteners (Step 6).

### 17.2 Install 8816 closer on backplate - push arm mounting

Fig. 17.2.1 Companion screw kit DK4607-001

Fig. 17.2.2 Companion closer adapter fasteners

17.2.1 Install 8816 closer for push arm application.

## NOTICE

Verify closer spring size prior to installation.

## NOTICE

## PUSH (J) mounting holes.

For push arm application, use PUSH (J) mounting holes (Fig.. 17.2.3).

Fig. 17.2.3 Closer adapter and closer assembly mounting to backplate - push arm application
1 Backplate, ED operator companion DC3468-050

5 Door closer, 8816 08210970

Fig. 17.2.4 Closer adapter and closer assembled to backplate

### 17.3 Push arm installation

Fig. 17.3.1 Drive arm installation

Fig. 17.3.2 Drive axle extensions
120 mm axle extension, door closer, DC4680-001
260 mm axle extension, door closer, DC4680-002

120 mm bolt, axle extension DF3465-020
260 mm bolt axle extension DF3465-040

Fig. 17.3.3 Bolt, axle extensions

### 17.3.1 Push arm hardware.

1. Reference Para. 9.2 for push arm hardware.

### 17.3.2 Attach drive arm to closer.

## CAUTION

Door must be fully closed!

## $\triangle$

## $\triangle$ WARNING

Use caution when working in proximity of door and push arm!.
2. Insert axle extension (Fig. 17.3.2) into drive arm.
3. Move arm to 8816 , inserting arm into 8816 pinion at a $90^{\circ}$ angle.
4. Insert M8 SHCS through drive arm and axle extension. Thread SHCS into 8816 pinion and tighten.

## NOTICE

## M8 SHCS tightening torque.

Use torque wrench ( 25 ft -lbs) to tighten SHCS to $17 \mathrm{ft}-\mathrm{lb}$ [23 Nm].

Fig. 17.3.4 Push arm screw kit DK2719-010

Fig. 17.3.5 Adjustment arm installation

1 Adjustment arm shoe
2 10-24 x $1^{\prime \prime}$ pan head Philips screw

Fig. 17.3.6 Connecting drive arm to adjustment arm

### 17.3.3 Drill two holes in door for adjustment arm shoe fasteners.

Push arm installation template (Chapter 16) documents location of shoe on door.

1. Drill holes in door for adjustment arm shoe fasteners. Reference push arm screw kit (Fig. 17.3.4).

### 17.3.4 Install adjustment arm assembly on door.

1. Fasten adjustment arm assembly to door
2. Insure arm is at installation height as shown on push arm installation template.

## NOTICE

Check shoe for level.
Check adjustment arm shoe for level as fasteners are tightened.
17.3.5 Connect adjustment arm to drive arm.

1. Loosen the two adjustment $\mathrm{M} 6 \times 10 \mathrm{~mm}$ flanged button head screws.
2. Using square, position adjustment arm assembly at $90^{\circ}$ angle to door.
3. Adjust length of adjustment arm until drive arm ball head is aligned with adjustment arm socket.

## CAUTION

Maintain adjustment arm assembly at a $90^{\circ}$ angle to door.
3. Insert adjustment arm ball head into drive arm socket.
4. Secure adjustment arm position by tightening the two $\mathrm{M} 6 \times 10 \mathrm{~mm}$ flanged button head screws.

## CAUTION

Recheck that adjustment arm is at $90^{\circ}$ angle to door.

### 17.3.6 Install shoe screw covers.

1. Install shoe screw covers.

### 17.3.7 Door closer adjustments.

Reference Chapter 19

## 18 Companion door, pull arm installation

### 18.1 Mount backplate, pull arm application

Fig. 18.1.1 ED100/ED250 Companion backplate template; RH pull version

Fig. 18.1.2 Pull arm backplate mounting

### 18.1.1 Install backplate, pull arm application.

1. Using backplate template (Fig. 18.1.1 and 18.1.2), locate left hand and right hand backplate mounting holes on door frame/wall.

## NOTICE

Template documents a RH pull installation. Template must be mirrored for a LH pull installation.
2. Place backplate on door frame/wall and align with the mounting hole locations in step 1.

- Check hinge pin centerline to edge of backplate distance.

3. Check backplate for level; adjust if necessary.
4. Mark backplate mounting hole locations.
5. Remove backplate and drill holes based on fastener selected for door frame/wall material.

- Reference Para. 2.1 for backplate mounting screw kit.
- Use appropriate wall anchors if required.

6. Place backplate on door frame/wall and secure with fasteners.

### 18.2 Install 8816 closer on backplate - pull arm mounting

5 Door closer, 8816 08210970
18.2.1 Install 8816 closer for pull arm application.

## NOTICE

Verify closer spring size prior to installation.

## NOTICE

## PULL (T) mounting holes.

For pull arm application, use
PULL ( $T$ ) mounting holes (Fig..18.2.3)

Fig. 18.2.3 Closer adapter and closer assembly mounting to backplate - pull arm application

Fig. 18.2.4 Closer adapter and closer assembled to backplate

### 18.3 Pull arm installation

Fig. 18.3.1 Drive arm with CPD lever installation

Fig. 18.3.2 Drive axle extensions
120 mm axle extension, door closer, DC4680-001

260 mm axle extension, door closer, DC4680-002

Fig. 18.3.3 Bolt, axle extensions

### 18.3.1 Assemble track hardware.

1. Reference Chapter 10, Para. 10.4 and assemble hardware into track based on RH or LH pull arm installation.

### 18.3.2 Assemble CPD lever to drive arm.

1. Reference Chapter 10, Para. 10.6.

Assemble CPD lever to drive arm based on RH or LH pull arm installation.

Fig. 18.3.4 Drive arm with CPD lever installed at 15 degree angle

2 10-24×1 1/4" flat head Philips screw DF2717-01Z

Fig. 18.3.6 Pull arm screw kit DK2719-020

### 18.3.3 Install drive arm with axle extension.

1. Install the drive arm with axle extension (Fig. 18.3.2) onto the 8816 pinion at a minimum angle of 15 degrees.
2. Thread $\mathrm{M} 8 \times 40 \mathrm{~mm}$ SHCS (for 20 mm axle extension) into 8816 pinion and tighten SHCS.

## NOTICE

M8 SHCS tightening torque.
Use torque wrench ( 25 ft -lbs) to tighten SHCS to $17 \mathrm{ft}-\mathrm{lb}$ [23 Nm].
18.3.4 Drill holes in door for track fasteners.

## NOTICE

Pull arm installation template.
Reference Chapter 16 for installation template.

1. Use pull arm template to locate two track mounting holes on door.
2. Drill two holes in door for track mounting.

- Reference Fig. 18.3.6 for pull arm screw kit.

## NOTICE

Check hole locations for level.
Check mounting hole locations for level prior to drilling holes.

Fig. 18.3.7 Track assembly

Fig. 18.3.8 Pivot pin/slide shoe attachment to CPD lever

Fig. 18.3.9 Track mounted to slide shoe/pivot pin assembly

Fig. 18.3.10 Track assembly mounted to door

1 Pull arm fasteners
Fig. 18.3.11 Track end caps installed

[^0]
### 18.3.5 Attach track pivot pin to CPD lever.

1. Remove fixing piece from one end of track.
2. Remove slide shoe/pivot pin assembly.
3. Position slide shoe/pivot pin under CPD lever mounting hole.
4. Thread pivot pin M8 SHCS into CPD lever mounting hole.
5. Use 6 mm hex key to tighten.

## notice

M8 SHCS tightening torque.
Use torque wrench ( $25 \mathrm{ft}-\mathrm{lbs}$ ) to tighten SHCS to 5.9 - $7.4 \mathrm{ft}-\mathrm{lb}$ [8-10 Nm].

### 18.3.6 Install track onto slide shoe/pivot pin assembly.

1. Slide track onto slide shoe.
2. Reinstall fixing piece assembly

### 18.3.7 Attach track assembly to door.

1. Rotate track assembly to door (Fig. 18.3.10).
2. Fasten track to door using fasteners selected in Para. 18.3.4

## NOTICE

## Check track for level.

Check track for level as fasteners are tightened.

### 18.3.8 Attach end caps.

1. Attach end caps to track.

### 18.3.9 Door closer adjustments.

Reference Chapter 19.

## 198816 closer adjustments

### 19.18816 door closer adjustments

### 19.1.1 8816 closer adjustments.

## CAUTION

Confirm closer spring size prior to making any closer speed adjustments.

## CAUTION

Do not back valves out beyond closer casting.
Fig. 19.1.1 8816 closer adjustments

### 19.1.2 Sweep speed (1) adjustment.

Adjust sweep speed from $70^{\circ}$ to $10^{\circ}$.

- Increase speed: Turn sweep valve CCW.
- Decrease speed: Turn sweep valve CW.

### 19.1.3 Latch speed (2)adjustment.

1. Adjust latch speed from $10^{\circ}$ to $0^{\circ}$

- Increase speed: Turn sweep valve CCW.
- Decrease speed: Turn sweep valve CW.

### 19.1.4 Backcheck (3) adjustment.

1. Adjust backcheck for door area from $110^{\circ}$ to $70^{\circ}$.

- Increase resistance: Turn valve CW.
- Decrease resistance: Turn valve CCW.

### 19.1.5 Backcheck positioning (5)adjustment.

Adjusting backcheck positioning will advance approximately $15^{\circ}$ in the "ON" position. Shipped from factory fully "ON".
Backcheck positioning MUST be turned ON for arm and track applications.

- Turn OFF: Turn valve CCW.
- Turn ON: Rotate valve CW.

## CAUTION

Maximum door opening angle: $110^{\circ}$.

## CAUTION

Door should close in 3 to 6 seconds from $90^{\circ}$.

## NOTICE

Closer supplied with a size 2 spring setting.

Fig. 19.1.2 8816 spring force adjustment

6 Spring force adjustment
Fig. 19.1.3 8816 closer adjustments

### 19.1.6 Delayed action (4)adjustment.

1. Adjust delayed action for door area from $110^{\circ}$ to $75^{\circ}$.

- Increase delayed action: Turn valve CCW.
- Decrease delayed action: Turn valve CW.

## Appendix A - Fine cover professional cover kits

## A. 1 Professional cover kit DK3401-05X installation instructions - single door

A1.1 Fine cover kit professional single, DK3401-O5X.
Fig.A1.1 Fine cover kit professional single DK3401-05X
1 Fine cover single DC3459-01X
3 End cap set DC3466-01X

2 Mounting plate extension HC3614-010

Fig. A.1.3 Mounting plate extension

Fig. A.1.4 Mounting plate extension installation

A.1.1 Install ED100/ED250 mounting plate.

Mounting plate installation:

- Reference Chapter 8, Para. 8.4 Mounting plate attachment to jamb or wall.

## A.1.2 Secure mounting plate extension to door frame and/or wall.

1. Align mounting plate extension with mounting plate.
2. Mark mounting plate extension hole locations in frame and/or wall. Drill four holes for selected fasteners.

## CAUTION

Use fasteners provided with ED100/ED250. Ref. Chapter 2.
3. Secure mounting plate extension to door frame or wall.
A.1.3 Mounting plate installation checks.

## CAUTION

- Check level.
- Check spindle to hinge centerline distance.
- Check alignment.

## Installation Instructions

## A.1.4 Install cover bracket.

1. Insert cover bracket collar into mounting plate groove at an angle (Fig. A1.5)
2. Rotate cover bracket parallel to mounting plate extension.
3. Position bracket at end of extension.

Fig. A.1.5 Professional cover bracket
2 Mounting plate extension
3 Professional cover bracket HC3481-010
3.1 Bracket collar

Fig. A.1.6 Install cover bracket

3 Professional cover bracket
HC3481-010

Fig. A.1.7 Cover bracket installed

## A1.5 Install Mode switch PCB into cover bracket.

1. Install Mode switch PCB into cover bracket.

Fig. A1.8 Mode switch PCB assembly

2 Mode switch PCB
HX3482-010

Fig. A1.9 Cover bracket with Mode switch assembly

2 Mode switch PCB
HX3482-010
4 Full cover bracket
HC3481-010

## A1.6 Install Mode switch cable.

1. Insert Mode switch plug (part of HX3482-010 assembly) into connector.
2. Route Mode switch cable to ED900 Mode switch terminals on terminal interface board.

- Secure cable to mounting plate channels using wire retainers.

3. Terminate cable wires at terminal strip X1 as shown in Fig. A1.11.

Fig. A1.10 Mode switch wiring

## A.1.7 Install Service Call label.

1. Install Service Call label at convenient location. Service call label included in Low Energy label kit HK3137-010.

9 dormakaba logoplate DD4613-020
$10 \mathrm{M} 6 \times 10 \mathrm{~mm}$ SHS with washer DF3495-01Z
$11 \mathrm{M} 6 \times 10 \mathrm{~mm}$ PFHS, DF3496-01Z

Fig. A.2.2 Mounting plates positioned for assembly

5 Mounting plate, ED100/ED250 operator

6 Mounting plate, FC extension DC3468-010

Fig. A.2.3 Pair mounting plate hole for M6 fastener

5 Mounting plate, ED100/ED250
operator

6 Mounting plate, FC extension
DC3468-010

## A.2.1 Drill two holes in pair mounting plate for M6 fastener.

1. Drill hole in each end of pair mounting plate for M6 x 10 mm PFHS (Fig. A.2.3).

## A.2.2 Assemble mounting plates.

1. Assemble the three mounting plates on a flat surface (Fig. A.2.2).

## CAUTION

Verify mounting plate assembly dimensions with installation template (Para. 7.3).

Fig. A.2.4 Mounting plate connectors and fasteners

4 Mounting plate extr connector DC3491-010
5 ED100/ED250 operator mounting plate

6 Backplate, ED operator FC Ext DC3468-010

Mode switch
DX3486-030
Fig. A.2.6 ED50/ED100/ED250 mode switch wiring

13
Mode switch
DX3486-030
2. Secure the operator mounting plates to the pair mounting plate (6) using:

- (2) mounting plate connectors (4)
- (2) M6 $\times 10 \mathrm{~mm}$ SHS with washer (8)
- (2) M6 x 10 mm PFHS (9)

Do not tighten screws.

## A.2.3 Check cover fit over ED operators.

1. Place the ED operators onto their mounting plates (Para.)
2. Place end caps (2) at end of each operator.
3. Place cover over end caps and ED100/ED250 operator.
4. Adjust mounting plates as necessary for cover fit over end caps.
5. Remove end caps and operators.
6. Tighten mounting plate connector fasteners.

## A.2.4 Mounting plate installation.

1. Reference Para. 8.4.

## A.2.5 Install mode switch.

1. Once header is installed, single mode switch must be installed in fine cover end cap opposite the power switch.
2. Mode switch wires to the active door operator (Fig. A.2.6).

## A.2.6 Install Service Call label.

1. Install Service Call label (Fig. A.2.7) at a convenient location.

- Service call label included in Low Energy label kit DK3137-030.

Fig. A.2.7 Label, service call

1 Label, Service call,
DD3425-010
