Flat keypad input unit

We are pleased to announce a further input unit design for Paxos advance IP. Based on customer feedback we now provide a flat keypad input unit having a thickness of 25 mm.

To achieve this slimness, the battery in the input unit has been removed. The system is designed to be external powered (or having a second input unit with batteries). In case of external power loss, an emergency 9V connector is placed inside the input unit. This way the lock system can be emergency operated preventing a lock-out.

New flat keypad input unit

- Dimension 137x135x25 mm
- Available as Set 2: Input unit with lock and bus cables.
Order number: 82753/0008
- Keypad as spare input unit.
Order number: 82753Z0023

Paxos Series

Flat input unit

Order numbers and availability

Order number	Description	Unit	Gross EUR
82753/0008 PAXAD-SET2KPF-IP 1220025364	Paxos advance IP Set 2 - Flat Keypad Input Unit - Redundant Lock - Bus cable 2 x 1.0m (A+B) - Operation instructions (CD) - Install instructions (CD) - EN, DE, FR, IT, ES, NL, HU, HR, SL, PL, LT, TR, FI	1 Set	1,005.00
82753Z0023 PAXAD-IUKSPBF-U 1220025072	Keypad Input Unit flat (no cable, no battery) - Including mounting bracket - EN, DE, FR, IT, ES, NL, HU, HR, SL, PL, LT, TR, FI	1 Piece	684.00

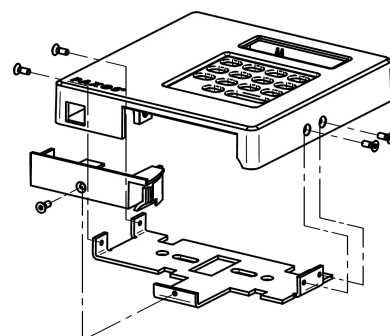

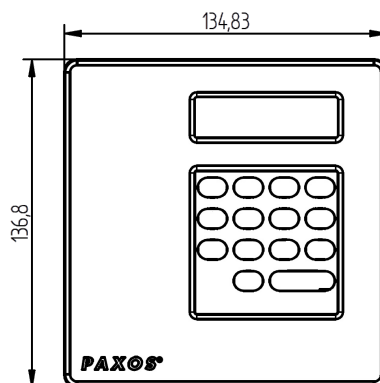

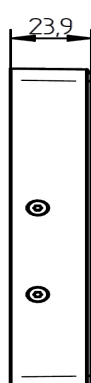

The flat input unit can be ordered right now. VdS certification for this flat input unit was granted January 2022.

Operation and compatibility

The operation and compatibility of the flat input unit is the same as for the normal keypad input unit.

When using the 9v emergency battery, the cable MUST be removed from the compartment, on the left hand side and against the safe door. This will allow the Battery compartment to be closed with the battery attached, allowing the battery code to be entered. Using the 9v battery will allow you to open a two lock system two times ONLY.
