

B-COMM for PeopleSoft Time and Labor Seamless Time Collection

An Enterprise-class Solution
B-COMM by Kaba

B-COMM for PeopleSoft Time and Labor

B-COMM for PeopleSoft Time and Labor is a scalable, enterprise-class application that facilitates data flow from a variety of time collection devices into PeopleSoft Time & Labor. The software is tested and approved through Oracle's rigorous Validated Integration process, giving users the confidence that the integration is functionally and technically sound.

Because organizations today are faced with doing more with less while at the same time dealing with increasing government regulations, a solution for accurately and efficiently collecting time is essential. Kaba's B-COMM communicates securely and seamlessly using standard APIs into PeopleSoft Time and Labor.

Additional integration is available for PeopleSoft Absence Management. Employees can conveniently request time-off at a Kaba device and have that request route directly to Absence Management. Managers may then take action on the request and have the data available back at the Kaba terminal.

Kaba's innovative data collection solution can result in substantial savings by increasing efficiency in the time collection and reporting process. Additional benefits are realized by reducing the potential exposure associated with inaccurately collected employee time. The B-COMM solution is a practical tool for organizations requiring a cost effective way to manage time and data collection.
