

Community and Keyscan Aurora

Integrated Access Management

Overview

Community and Keyscan Aurora Access Management software seamlessly integrate to provide the ultimate cost-effective and scalable access control solution for multihousing properties. Whether you are managing market rate apartments, privatized student housing or senior living facilities, dormakaba now offers a centralized interface to manage all aspects of property access control from individual living spaces to property perimeter and parking gates.

This browser-based access management software is designed specifically for multihousing properties. Community provides multihousing property employees with a robust, user-friendly tool to intuitively manage authorization to common areas and residence doors and control perimeter access points throughout the property, providing security, convenience and operational efficiency.

Integration Benefits

- Add or remove resident authorization in Community and access points secured by Keyscan are automatically updated in real-time.
- Manage access control through a single interface.
- Streamline day-to-day resident access management.

Community Access Management Software

Community provides the security of an access audit system, ultimate credential management flexibility and superior control throughout your property.

- Configurable user profiles to secure system access.
- Quick credential read-back and replacement for lost and found credentials.
- Common and restricted area management through credential or scheduled access.
- View, save or print reports including key creation, user authorizations, access point audits, credential expiration and credential/user assignment.
- Supports various credential media types such as RFID keys and fobs.
- Supports multi-room access with one key, fob or mobile credential.
- Securely programs and encodes credentials and accessories.

Keyscan Aurora Access Control Software

While the single Community interface streamlines day-to-day management, the property manager always has the option of engaging the secondary Aurora software to utilize advanced security features.

- VMS Integration - Verify access alarms with live video and review recorded video from prior events
- Facility Lock Down - Activate a full or partial facility lockdown in real-time.
- Site Management - Create and manage a person's data through a single people management screen, across multiple sites or locations.
- Active Mapping - Map visual representation using floor plans and device icons indicating door status, alarm points, input status and IP cameras.
- Event Management - Set "event and response" actions and receive email notifications for events such as intrusions, low battery status or unauthorized access attempts.

Mobile Access

Enhance resident convenience with mobile access. Property managers can meet the rising demand for greater digitization. Convenient, reliable and secure for residents and employees, dormakaba mobile access solutions are end-to-end mobile credential applications utilizing Bluetooth Low Energy (BLE), the preferred communication technology for dormakaba mobile enabled electronic locks and high-frequency readers. Our mobile access solutions seamlessly integrate with access control systems, providing a cloud-based platform to securely issue, authenticate, manage and revoke keys on mobile devices deployed in residential properties of any size.
