

WebTerminal, Booking Viewer and HTML timesheet

Benefits at a glance:

- Time recording from wherever you are in remote workplaces or on business trips
- Intuitive, quick and easy recording of attendance and absence times on PC
- Configure the WebTerminal as you wish with your own functions, symbols and backgrounds
- Overview of all bookings in one place
- View and print out personal time sheets from PC, terminal or dormakaba ERP Time app
- No need to distribute paper timesheets

WebTerminal:

Time recording on PC

The WebTerminal module lets you record attendance and absence times quickly, easily and intuitively directly on PC. The standard interface has the same coloured function keys as stationary recording terminals. However, you can also configure the WebTerminal module individually by choosing your own functions, symbols and background images.

All employees can view their personal time bookings and time accounts.

Booking Viewer:

Bookings at a glance

Booking Viewer displays all bookings in one place – from time recording to production data acquisition and access control.

HTML timesheet:

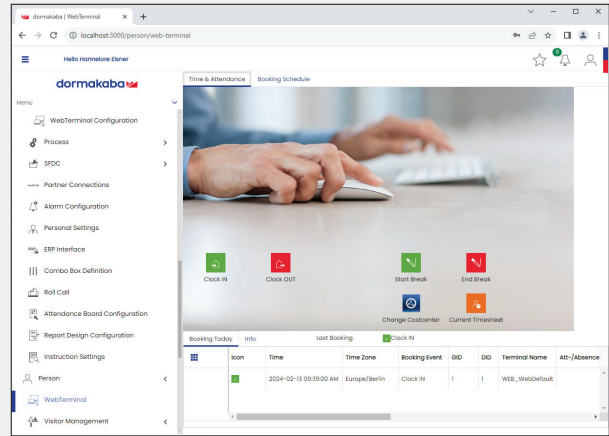

Employee times at the push of a button

Any employee of your company can display their personal time sheet on computer or an information terminal, print it out and consult the HR department about it if necessary. This improves dialogue with employees and reduces the effort involved in distributing time sheets.

Configuration examples

WebTerminal

- Easy definition of user groups
- Unique field mapping for every user role
- Developed for time and attendance functions
- Unique input form on screen
- Daily booking overview
- Time balance information
- Periodic booking overview
- Cost centre change
- Personal favourites
- Incorrect bookings highlighted in red
- Time balance information
- Different configuration profiles possible
- Assign groups of people

Booking Viewer

- Track all bookings in the subsystem
- The current booking and master data of employees and data concerning other people/visitors (e.g. access bookings, time events, time events in SAP format, error codes, employee names, visitor passes etc.) are always available in the SAP system
- Evaluate, for example, booking volumes, incorrect bookings or unauthorised access attempts
