

MAGNEO Sliding entrance system

Powered by LMD technology

Powered by linear magnetic drive technology (LMD), the DORMA MAGNEO redefines both the function and design of sliding systems. MAGNEO is an automated sliding system designed to work in ways and places that were never possible before—whether public, commercial, or private. Its sleek Contur design has minimalist clean lines that blend seamlessly

to meet discriminating applications. The innovative magnetic technology ensures that the MAGNEO is safe, reliable, whisper quiet, touch free, and resistant to wear.

Ideal for both new and retrofit interior applications, the MAGNEO's modern design dramatically transforms and enhances interior spaces while supporting green initiatives at the same time. Its easy operation makes it an attractive and efficient way to update both the function and appearance of interior doorways.

The versatile MAGNEO meets all safety requirements for low energy applications. Its extra sensitive operation instantly detects any obstruction. Activation is achieved via touchless design push plate, radio remote control, or traditional infrared motion sensors.

MAGNEO's revolutionary technology leads to revolutionary possibilities for incorporating automated openings into interior design.

Technical details

Mounting	Surface mount Recessed mount Glass mount
Three widths	Up to 34-7/16" (875 mm) Up to 39-3/8" (1000 mm) Up to 44-1/4" (1125 mm)
Internal cover	Height: 2-7/16" (62 mm) Height: 2-15/16" (75 mm)
Max panel weight	176 lb (80 kg)
Door panel types supported	Frameless glass Framed glass Wood metal
Door panel styles	MANET Clamp rail
Floor guides	For wood door panels For frameless door panels For framed door panels
Door activation	Easy Push-&-Go operation Wireless touch plate Wireless touchless switch Wireless key fob
Standard finish	Clear anodized aluminum
Optional finishes	Satin stainless Polished stainless* Satin brass* Polished brass* Oil-rubbed bronze Painted

* Available with clamp rail door style only
