

System 6000/Keyscan Integrated Access Control Management

Overview

System 6000 and Keyscan Aurora access management software seamlessly integrate to provide the ultimate cost-effective and scalable access control solution for multihousing properties. Whether you are managing market rate apartments, privatized student housing or senior living facilities, dormakaba now offers a centralized interface to manage all aspects of property access control from individual living spaces to property perimeter.

This Windows®-based system offers credential management flexibility with multiple username/password levels, detailed system audit reports, and customizable credential programming.

Integration Benefits

- Add or remove resident authorization in System 6000 and access points secured by Keyscan are automatically updated in real-time.
- Manage access control through a single interface.
- Streamline day-to-day resident access management.

System 6000 Access Control Management Software

System 6000 provides the security of an access audit system, ultimate credential management flexibility and superior control throughout your property. It is compatible with all dormakaba Saflok lock models such as Quantum Series, MT Series, RT, adese and Confidant RFID.

- Configurable user profiles to secure system access.
- Quick credential read-back and replacement for lost and found credentials.
- Common and restricted area management through credential or scheduled access.
- View, save or print reports including key creation, user authorizations, access point audits, credential expiration and credential/user assignment.
- Supports various credential media types such as RFID keys and fobs.
- Supports multi-room access with one key, fob or mobile credential.
- Securely programs and encodes credentials and accessories.

Keyscan Aurora Access Control Features

While the single System 6000 interface streamlines day-to-day management, the property manager always has the option of engaging the secondary Aurora software to utilize advanced security features.

- **Video Management Systems Integration**
- **Facility Lock Down** - Activate a full or partial facility lock down in real time.
- **Site Management** - Create and manage a person's data through a single people management screen, across multiple sites or locations.
- **Active Mapping with Integrated Floor Plans** - Create visual representation using floor plans and device icons indicating door status, alarm points, input status and IP cameras.
- **Sophisticated Access Features** - Create visual representation using floor plans and device icons indicating door status, alarm points, input status and IP cameras.
- **Event Management** - Set "event and response" actions and receive email notifications for events such as intrusions, low battery status or unauthorized access attempts.

Mobile Access

Enhance resident convenience with mobile access. Property managers can meet the rising demand for greater digitization. Convenient, reliable and secure for residents and employees, dormakaba mobile access solutions are end-to-end mobile credential applications utilizing Bluetooth Low Energy (BLE), the preferred communication technology for dormakaba mobile enabled electronic locks and high frequency readers. Our mobile access solutions seamlessly integrate with access control systems, providing a cloud-based platform to securely issue, authenticate, manage and revoke keys on mobile devices deployed in residential properties of any size.
