Keyscan's K-TV add-on module provides CCTV integration with System VII offering a single software interface for both access control and CCTV. It integrates with most RS-232 camera systems, VMSs* and select DVRs*, seen below, and IP addressable cameras.

- K-TV allows you to call up the appropriate camera on-screen providing system users an immediate visual of an alarm event
- Allows users to monitor up to 36 video feeds on a single screen
- Permits on-screen camera commands (PTZ controls) for full control of your CCTV system.
- From the archived alarm events screen use the "link to video" option to view the applicable alarm event video without the hassle of searching full video files.
- K-TV tags your CCTV alarm events for fast retrieval.
- Search for any event by date and time.
- Multi-monitor support allows for a large workspace. Ideal for monitoring stations.
- When used with the K-BADGE add-on module, users can compare a cardholder's on-file image to a live video image at any reader controlled access point that is equipped with a CCTV camera.
- Keyscan offers integration with many of the leading DVRs and NVRs available on the market.
Supported VMSs
- Exacq
- Avigilon
- Milestone (coming soon)
