# MUTO Premium XL80 Telescopic

Wall mount with moving floor guide - Optional Dormotion

Installation Manual

Table of contents

1   Technical specifications

1.1   Overview

These instructions are for installation of MUTO Premium XL80 Telescopic panels for the following mounting and style versions:

1. Wall mount

1.1.1   General information
- dormakaba requires use of tempered laminated or tempered monolithic glass.
- dormakaba glass hardware is not suitable for harsh environment; for example, applications where chemicals (e.g. chlorine) are used such as indoor swimming pools, saunas, or salt-water pools.
- Never move sliding panels faster than walking speed and always stop the door manually before it reaches end position.
- Do not slide doors with excessive force. Ensure proper installation of limiting stop to prevent door from opening too far.

1.1.2   Intended use
- For sliding doors in dry indoor areas only.
- For manual slow opening and closing only.

1.1.3   Glass requirements/fittings/mounting
- The substructure/wall must be able to bear permanent loads, be level (max. tolerance: 1/16" [2] per 39" [1m]).
- Fasteners must be sufficiently dimensioned for the substructure/wall and weight of the door.
- When adjusting glass components, always stick to the required clearance for the respective hardware. Adjust clearance so glass does not come in contact with any hard surfaces such as glass, metal or concrete.
- Do not use excessive force when installing the glass (avoid over tightening screws.)

1.1.4   Requirements for glass panel
- dormakaba requires use of fully tempered glass, which complies with ASTM C 1036 and ASTM C 1048. Secondary heat soaking processes are recommended but not required. This applies to both tempered monolithic and tempered laminated glass.
- Clamping area must be flat and uncoated (no self-cleaning coating!)
- Never use glass with conchoidal fractures and/or damaged edges.

1.1.5   Safety instructions
- Installation requires two people.
- Always wear protective clothing.
- Only properly qualified and specially trained staff are authorized to mount dormakaba glass hardware.
- Due to crushing hazards and possible injury caused by breakage of glass during mounting, corresponding protective clothing (especially gloves and protective goggles) is required.
- Never clamp metal fitting hardware directly to glass surface.

1.1.6   Symbols used - Safety/Installation

⚠️	**CAUTION**
	Mounting components must meet the requirements of substructure/wall and door weight. Please read the technical information for fittings.

⚠️	**WARNING**
	Risk of breaking glass. When installing the door, support the door panel with a block of wood or similar object.

ℹ️	**TIPS AND RECOMMENDATIONS**
	Information note

▶◀	**CLOSING EDGE OF DOOR**

1.1.7   Maintenance, care, repair
- Immediately replace damaged parts.
- Always use original dormakaba parts.
- Clean clamping area with alcohol-based standard commercial cleaning agent before mounting the glass hardware.
- Use a damp cloth for occasional cleaning.
- Always use silicone - and oil-free cleaners (e.g. acetone).
- Check glass hardware at regular intervals for proper positioning, smooth operation and correct adjustment.
- High traffic door systems require inspection by properly qualified staff (specialized companies or installation firms.)

1.1.8   Disposal
Disposal in accordance with local, state and national regulations.

1.2 Specification - technical data

1.3 Tempered laminate glass (TLG) and adhesive specifications

Required parts for laminate glass with MUTO System (not included)	Part Number	Quantity	Usage recommendation
3M™ Scotch-Weld™ Urethane Adhesive, DP 605 NS	934.800	1 tube	1 tube per 4 roller carriers
3M™ Scotch-Weld™ EPX™ Plus II Applicator with 1:1 Plunger [2]	934.801	1 applicator	1:1 plunger with 934.800 adhesive
3M™ Scotch-Weld™ EPX™ Plus II Mixing Square Nozzle, 5.3mm [3]	934.805	Pk of 4	4 nozzles per 1 tube of adhesive
MUTO TLG gasket set	807.640	1 set	
Handling time frame	**Function**		**Time**
	Working life *(time between application and clamping of carrier)*		5 minutes @ 75°F
	Handling strength		20 minutes @ 73°F or more
	Full cure time *(normal door usage not recommended until full cure time has been met)*		48 hours @ 73°F or more

NOTE: Door glass should not be installed until the full cure time has been reached (see chart above).

1.1 Clean clamping area with alcohol-based standard commercial cleaning agent before mounting the glass hardware.

Important safety-related information for the mounting and use of dormakaba glass hardware.

1.2 Never clamp metal fitting hardware directly to glass surface.

1.3 Never use clamping products on surfaces with self-cleaning coatings.

**2 Scotch-Weld™ EPX™ Plus II Applicator with 1:1 Plunger is a trademark of 3M.**

3 Scotch-Weld™ EPX™ Plus II Mixing Square Nozzle is a trademark of 3M.

Bottom section of end stop
End stops

3.1.1 Slide end stops into each end of the SMP track.

NOTE: Loosen bottom section of end stop for easier install.

NOTE: Exact location/adjustments will be determined in the Adjustment End Stop Location step.

3.2 Specifications for securing track to mounting surface

3.2.1 Ensure track is properly level and secure it to the header mounting surface per the appropriate measurements on the following page.

NOTE: SEE DIMENSION INSTRUCTIONS ON NEXT PAGE FOR REFERENCE.

The wall reinforcement must be a minimum of ¼" [6] x 3" [76] steel angle, 16 gauge metal stud, or 1 1/2" [38] thick wood blocking secured to the wall studs on a maximum 16" [406] centers for the length of the track. The wall reinforcement may be flush on the wall surface or on the interior of the wall. For masonry walls the track may be secured directly to the wall with lead anchors.

3.2.2 Use appropriate fasteners according to the following recommendations.

Track mounting screws must fully penetrate the steel angle, metal stud, or wood blocking, utilizing the predrilled holes in the MUTO track.

Consult with a structural engineer to determine if reinforcement is adequate for your specific application or to meet specific codes in your location.

3.3A   Installing roller carriers: on SMP tempered monolithic glass ONLY

Secure   Glass gasket

(Front of) Glass

3M™ Scotch-Weld™ EPX™ Plus II Applicator

Stop when adhesive can be seen past end of roller carrier.

(Front of) Glass   (Back of) Glass

⚠ **NOTE: THE RECOMMENDED ADHESIVE'S SET-UP TIME IS 20 MINUTES FOR THE DUO-PAK CARTRIDGES.**

⚠ **NOTE: USE 1:1 RATIO PLUNGER WITH THE 3M™ Scotch-Weld™ Urethane Adhesive.**

⚠ **NOTE: FULLY CLEAN SURFACE OF GLASS WITH AN ALCOHOL-BASED MILD GLASS AND SURFACE CLEANER. ENSURE NO DEBRIS IS ON THE GASKET.**

⚠ **ENSURE ROLLER CARRIER WHEELS ARE FREE OF DEBRIS.**

3.3B.1 Slide SMP carriers onto glass.
3.3B.2 Replace existing gasket with TLG gasket.
3.3B.3 Slide laminated glass gasket and metal shim between glass and roller carrier.

NOTE: Orient with gasket facing the glass.

3.3B.4 Relace existing set screws with vented set screws.
3.3B.5 Tighten vented set screws at 4 ft lbs (5Nm).

NOTE: Onto scrap material, first dispense approximately 12" of 3M™ Scotch-Weld™ Urethane Adhesive prior to application to prevent mixing errors and ensure optimal hardening.

3.3B.6 Dispense into vented set screws on both sides of carrier.

⚠ Stop application when adhesive can be seen past edge of roller carrier.
⚠ DO NOT WIPE any excess adhesive from glass surface. Allow adhesive to dry and scrape off glass surface with a beveled-edge chisel or putty knife.

NOTE: Keep glass flat during curing process.

NOTE: See chart in Specifications section for appropriate curing time.

3.4   Adjust roller carrier wheels

Fig 5

3.4.1 If more clearance is required between wheel and track, adjust accordingly.

3.4.2 Loosen wheel adjustment screw.

3.4.3 Slide wheel up or down to adjust.

3.4.4 Retighten wheel adjustment screw.
3.5   Disengage the anti-jump

Fig 6

3.5.1 Disengage the anti-jump on SMP roller carrier.

3.5.2 Using a hex key, push anti-jump adjustment screw IN and turn **COUNTER-CLOCKWISE** 90° to disengage anti-jump.

SHCS
SHCS
4.14.1 Rotate RH DM fastening plates.

- Using 4 mm hex key, loosen fastening plate hex screws.
- Rotate fastening plates until they are parallel to the DM unit (Fig. 30.2) Snug hex screws.

4.14.2 Move door to close position.

- For installation of RH DM unit, door must be in the closed position against bumper.

Fig. 30.7 DM unit aligned in track

Incorrect orientation   Correct orientation
DM unit   DM unit

4.14.3 Align DM unit in track, engage DM hook in DM trigger.

- Align DM unit in track (Fig. 30.7).
- Slide DM unit over the DM trigger block until the DM hook engages the DM trigger (Fig. 30.4)

4.14.4 Use adjustment tool to set DM unit final position.

- Place adjustment tool flat against DM unit with fork between DM hook and DM end stop (Fig. 30.5).
- Slide DM unit over until hook and DM end stop are against the fork. This sets 5 mm gap (Fork gap).
- **Trigger height:** Adjust so trigger sets on top of adjustment tool (Para. 4.15).

4.14.5 Secure the DM unit in position.

- NOTE: Insure door is fully closed against bumper before performing this step.
- Using 4 mm hex key, tighten DM unit fastening plate socket head cap screws . Fastening plates must engage the track (Fig. 30.6 and .8).

**4.14.6   Rotate DM fastening plates.**
- Using 4 mm hex key, loosen fastening plate hex screws.
- Rotate fastening plates until they are parallel to the DM unit (Fig. 30.10)
- Snug hex screws.

4.14.7   Move door to open position.
- For installation of LH DM unit, door must be in the open position against bumper.

4.14.8   Align DM unit in track, engage DM hook in DM trigger.
- Align DM unit in track (Fig. 30.15).
- Slide DM unit over the DM trigger block until the DM hook engages the DM trigger (Fig. 30.12)

4.14.9   Use adjustment tool to set DM unit final position.
- Place adjustment tool flat against DM unit with fork between DM hook and DM end stop (Fig. 30.13).
- Slide DM unit over until hook and DM end stop are against the fork. This sets 5 mm gap (Fork gap).
- **Trigger height:** Adjust so trigger sets on top of adjustment tool (Para. 4.15).
4.14.10 Secure the DM unit in position.
- NOTE: Insure door is fully open against bumper before performing this step.
- Using 4 mm hex key, tighten DM unit fastening plate socket head cap screws . Fastening plates must engage the track (Fig. 30.16).

Plates rotated

4.15   Adjust start/stop pin height (if necessary)

Fig 31

4.15.1 **Adjust HEIGHT of start/stop pin, if necessary**:
- Loosen hex screws.
- Slide pin and plate up or down.

Hex key size	
Hex screws	3 mm

CORRECT PIN HEIGHT/ORIENTATION

4.16 QMP track cover and end caps

Fig 32
4.16.1 Add adhesive foam pieces to QMP glass clamp profile, spaced accordingly.
4.16.2 Peel off adhesive.

4.16.3 Slide cover over outside of profile.

4.16.4 Peal adhesive off end caps and press onto ends of profile.
4.17   SMP cover profile

Fig 33

Hex key size	
XL80	3mm

NOTE: SMP track and QMP track removed for easier viewing.

Fig. 1

NOTE: If cover profile does not fit, check and correct roller carrier locations, if necessary.

M4 x 8

Low head socket cap screw

8mm   4mm

4.17.1   Slide doors fully **CLOSED**.

4.17.2   Slide SMP cover profile up and between the SMP roller carriers as shown in Fig. 1 above.

4.17.3   Secure with included fasteners.

## 4.18 Cover profile for passage

Fig 34

Hex key size	
XL80	2.5mm

SMP/QMP glass

M4 x 6

Fat head socket cap screw

6mm **4mm**

4.18.1 Slide both doors all the way **OPEN**.

4.18.2 Slide cover profile for passage up behind QMP track.

4.18.1 Secure cover profile for passage with all included fasteners at 2 ft lbs [2.5Nm].
4.19 Cover clips

Fig 35

4.19.1 Insert cover clips into track (one clip per foot).

4.19.2 Insert perpendicular to track, and turn **CLOCKWISE** to snap into place.

4.20   Install brush profile
Fig 36

4.20.1   Match brush to cover length.   4.20.2   Slide brush into cover.

4.21   Secure system cover and system end caps

Fig 37

4.21.1   Secure cover to clips and snap into place.
NOTE: Roll cover from the bottom upwards. Ensure the bottom of the cover is supported by the groove in the cover clip.

4.21.2   Snap end caps onto track.
